

Driver Database Project

Primary action:

Test the driver database and ensures that it work effectively.

Features of the data bases to test:

1.Load file:

- Loads driver's records.
- Verify that the record is loaded correctly.

2.Insert Driver:

- Inserts drivers' data at the beginning, middle and end of the program.
- Verify that the drivers' records are inserted properly.

3.Search Driver:

- Searches for the current and past drivers.

4.Recent Licenses:

- Inputs N in the program
- Check for accurate results

5.Oldest Licenses:

- Inputs N in the program
- Check for accurate results

6.Move record to Inactive:

- Removes drivers records from active
- Adds drivers records to active

7.Menu Interface:

- All record options work
- Checks if invalid inputs are fixed

Compilation Test:

- Runs the make file
- Checks to see if there are no errors
